About me

I'm a software developer passionate about turning ideas into functional and user-friendly software solutions. With 1 year of professional experience and 3.5 years of hands-on coding expertise, I'm excited about embarking on a journey of continuous learning and growth in the dynamic world of software development.

My coding journey began with Javascript, Typescript, and C#. Since then, I've had the privilege of working on lots of full-stack applications and some games.

My experiences have honed my skills in React, Typescript, Redux, MongoDB, PostgreSQL, and some skills on the cloud at AWS, and I'm eager to apply these skills to tackle new challenges. What truly motivates me is the opportunity to collaborate with talented teams to create software that solves real-world problems.

I thrive in environments where innovation, creativity, and problem-solving are valued, and I'm committed to delivering solutions that exceed expectations.

Outside of coding, you can find me cooking, playing football, or spending time with my family. Whether it's exploring the latest tech trends or attending meetups, I'm always looking for ways to stay engaged with the tech community.

In my previous jobs, I have learned to be both accurate and fast and I have become more organised and have a keen eye for details.

I am ambitious, patient, optimistic, and dedicated to my work.

I am open to new opportunities and connections, so please feel free to reach out if you'd like to chat about software development, collaboration, or simply to connect. Let's connect and explore how we can work together to build remarkable software

Thank you for your time,
Mohamed Mahmoud
